Money – The finance team has been asked to revisit the yearly budget. This process requires you to review your project's budget estimates as it is expected that it could change in range from -$2 to +$2 per team member per hour.

Review your project budget and determine what impact BOTH the reduced (-$2 p/h) and the increased (+$2p/h) amounts will have on your project. Also, consider what other areas of your project would or could need adjustment to accommodate this change.

People – Your top priority engineer candidate, the one you really want to make an offer to and fits all the needs you have defined, is not going to be available for 2 months. Your project will be in full production at that time.

Re-evaluate your team member staffing priorities and consider if you want wait for this candidate. Decide what course you want to take and determine what areas of your project and roadmap would need adjustment to accommodate the impact of this choice.

Tech – The CTO has asked you to review your selected game engine, provide additional information as to the "cost" of changing right before production development starts.

Review your selected game engine and consider what other areas of your project would need adjustment to accommodate this change.

Logistics – The internet access that your team is using is too small and is causing performance issues with the selected development tools.

Based on your selected engine, features, and tools, and team location(s) - make a case for the company to increase the overall bandwidth allocation to improve the chance of your project success as well as consider what other areas of your project would need adjustment if this change does not occur.

Wild Card – The CEO has asked you to re-evaluate your roadmap for a potential dual device release – this could be either a dual format release (phone/tablet) for the same OS or multiple OS' on different devices.

Based on the choices you have made, determine what you would recommend based on which option will have the least impact on your roadmap and budget. Consider what other areas of your project would need adjustment to accommodate this change.
